

DELIVERING THE FUTURE OF CONNECTIVITY

“At Stage 2 Networks, we are bringing the benefits of the IP revolution and a total solution to our business customers in ways that were envisioned many years ago, but are only now being achieved. We strive each day to make the decision to do business with Stage 2 one of the easier business decisions you make.”

Joseph P. Gillette, Chairman and CEO, Stage 2 Networks

Since 2004, Stage 2 Networks has consistently grown and established itself as a leader in the hosted PBX market. The company is directed by Joe Gillette, a seasoned telecom entrepreneur with a strong track record of execution and leadership, and employs industry experts in each of the following business-critical functions:

- Engineering
- Network Operations
- Marketing and Sales
- Provisioning
- Installation
- Customer Service

Our mission is to empower business customers to fully leverage Stage 2's state-of-the-art technology while – at the same time – reduce their capital expenditures and operating costs thanks to our innovative solutions and competitive prices.

Stage 2 offers a robust and redundant network with connectivity, quality of service and local number portability available across the country and, often, around the world. Our services include hosted PBX, or business phone system solutions, without the capital expenditure typically associated with purchasing a new phone system. We also provide phone line replacement at reduced cost with enhanced functionality, whether POTS or PRI services. Finally, all of our products are supported by robust data connectivity that can fully integrate our customers' communication platform for both voice and data services across multiple locations. Stage 2's productivity-enhancing features and functionality serve to differentiate our products and offer an added bonus to our customers.

Stage 2's sales and implementation partners extend our reach to a wide audience and we thank them for their confidence and commitment to grow with us. It is an exciting time for Stage 2 and our partners to be involved in the telecom industry because we have so much to offer customers with our hosted services model – an idea whose time has come.
